The sequences given in ABB80222-28 represent lethal toxin neutralising factor (LTNP) peptides which may be used for reducing elevated levels of factor (LTNP) peptides which may be used for reducing elevated levels of serum proteins selected from immunoglobulin E (IGE), nerve growth factor (NGF), insulin, myoglobin and/or adenosine deaminase (ADA). In carticular, the methods of the invention are useful for diagnosing and treating conditions with elevated serum IGE levels, e.g. asthma, at diagnosing and triorimmune disease (e.g. erythematosus (SLEB), rheumatoid arthritis, Sjogren's syndrome, Reiter's syndrome, Graves' disease, Addison's disease or Hodgkin's disease) or depression. The efficacy of the protein may be monitored by assaying a human endogenous protein by performing an enzyme-linked immunosorbent assay (ELISA) on a saliva ample using an anti-serum that is specific for the protein. Saliva collection is relatively non-invasive when compared to blood collection for serum. Saliva can be centrifugation to separate serum. Saliva proteins can be assayed by a simple ELISA test, whereas an assay of proteins from the serum requires a more complicated sandwich type ELISA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Lethal toxin neutralising factor; LTNF; serum protein; immunoglobulin E; IgE; nerve growth factor; NGF; insulin; myoglobin; adenosine deaminase; AbA; asthma; diabetes; autoimmune disease; systemic lupus erythematosus; SLE; rheumatoid arthritis; Sjogren's syndrome; Reiter's syndrome; Graves' disease; Addison's disease; Hodgkin's disease; depression;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             This sequence represents the peptide of the invention. It is a Lethal Toxin Neutralising Factor (LTNF) moiety from a 68 kba anti-haemorrhagic protein derived from an opossum. The peptide can be used in a method for treating a victim of envenomation from a poisonous snake, preferably a poisonous snake from the family of Elapidae, Viperidae or sea snake. It is useful for the treatment of snake bites, sepsis, allergies caused by the environment and treatment of be or scorpion stings or toxicities caused by plant or bacterial toxins. The peptide can also be used in histamine reaction treatment. The peptide can be used in envenomation treatment for a variety of snakes without prior identification of the snake. Being short it can be synthetically prepared rather than the current production in horses, where some people can show hypersensitivity

                                                                                                                                                                                                                                                 The sequences given in ABB80222-28 represent lethal toxin neutralising factor (LTNF) peptides which may be used for reducing elevated levels of serum proteins selected from immunoglobulin B (1gE), nerve growth factor (NGF), insulin, myoglobin and/or adenosine deaminase (ADA). In particular, the methods of the invention are useful for diagnosing and treating conditions with elevated serum IgE levels, e.g. asthma. C diabetes, autoimmune disease (e.g. erythematosus (SLE), rheumatoid arthritis, Sjogren's syndrome, Relier's syndrome, Graves' disease, Addison's disease or Hodgkin's disease) or depression. The efficacy of the protein may be monitored by assaying a human endogenous protein by perotein may be monitored by assaying a human endogenous protein by c performing an enzyme dimmunosorbent assay (ELISA) on a saliva sample using an anti-serum that is specific for the protein. Saliva collection is relatively non-invasive when compared to blood collection of the protein and protein an entitinged immediately, whereas blood requires
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ö
                                                                                                                                                                            e.g.
                                                                                                                                                                                                                                                                                                                                                                                                                                  clotting time before centrifugation to separate serum. Saliva proteins can be assayed by a simple ELISA test, whereas an assay of proteins from serum requires a more complicated sandwich type ELISA

The sequences given in ABB80222-28 represent lethal toxin neutralising factor (LTMF) peptides which may be used for reducing elevated levels of serum proteins selected from immunoglobulin E (1gB), nerve growth factor (MGF), insulin, myoglobin and/or adenosine deaminase (AbA). In particular, the methods of the invention are useful for diagnosing and treating conditions with elevated serum IGE levels, e.g. asthma, diabetes, autoimmune disease (a.g. erythematosus (SLB), rheumatoid arthritis, Sjogren's syndrome, Reiter's syndrome, Graves' disease. Addisease or Hodgkin's disease) or depression. The efficacy of the protein may be monitored by assaying a human endogenous protein by performing an enzyme-linked immunosorbent assay (ELISA) on a saliva callection is relatively non-invasive when compared to blood collection for serum. Saliva can be centrifuged immediately, whereas blood requires
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ö

                                                                                                                                                                                                                                                                                                          ö
                                                                                                                            The present invention relates to novel human cancer-related genes and proteins (ABZ79120-ABZ78168 and ABR01789-ABR01861). The genes and proteins are useful for eliciting a humoral or cellular immune response. The genes are useful as probes and primers for the amplification and/or detection of genes, mRNAs or their fragments, as reagents for the diagnosis and/or prognosis of cancer, as coding sequences capable of directing the expression of the protein, as tools for modulating or inhibiting the expression of genes and/or translation of transcripts, and as therapeutic, prognostic and diagnostic reagents for cancer. The present sequence is a human leukocyte antigen (HLA) peptide, used in an example from the invention
                                                     New composition comprising a substance that modulates the structure of proteins and polymucleotides, useful for therapeutic, prognostic and diagnostic reagents for eliciting cellular or humoral immune response in cancer patients.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          New composition comprising a substance that modulates the structure of proteins and polymucleotides, useful for therapeutic, prognostic and diagnostic reagents for eliciting cellular or humoral immune response in cancer patients.

                       proteins (ABZ78120-ABZ78168 and ABR01789-ABR01861). The genes and proteins are useful for eliciting a humoral or cellular immune response. The genes are useful as probes and primers for the amplification and/or detection of genes, mRNAs or their fragments, as reagents for the diagnosis and/or prognosis of cancer, as coding sequences capable of directing the expression of the protein, as tools for modulating or inhibiting the expression of genes and/or translation of transcripts, and as therapeutic agents. The proteins and peptides are useful as therapeutic, prognostic and diagnostic reagents for cancer. The present sequence is a human leukocyte antigen (HLA) peptide, used in an example
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The present invention relates to novel human cancer-related genes and proteins (ABZ78120-ABZ78168 and ABR01789-ABR01861). The genes and proteins are useful for eliciting a humane response. The genes are useful as probes and primers for the amplification and/or detection of genes, mRNAs or their fragments, as reagents for the diagnosis and/or prognosis of cancer, as coding sequences capable of directing the expression of the protein, as tools for modulating or inhibiting the expression of genes and/or translation of transcripts, and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        proteins and polynuclectides, useful for therapeutic, prognostic and diagnostic reagents for eliciting cellular or humoral immune response in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ĕ

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The present invention relates to novel human cancer-related genes and proteins (ABZ79120-ABZ78168 and ABR01789-ABR01861). The genes and proteins are useful for eliciting a humoral or cellular immune response. The genes are useful as probes and primers for the amplification and/or detection of genes, mRNAs or their fragments, as reagents for the diagnosis and/or prognosis of cancer, as coding sequences capable of directing the expression of the protein, as tools for modulating or inhibiting the expression of genes and/or translation of transcripts, and as therapeutic agents. The proteins and peptides are useful as therapeutic, prognostic and diagnostic reagents for cancer. The present sequence is a human leukocyte antigen (HLA) peptide, used in an example
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              New composition comprising a substance that modulates the structure of proteins and polynucleotides, useful for therapeutic, prognostic and diagnostic reagents for eliciting cellular or humoral immune response in

The present invention relates to novel human cancer-related genes and proteins (ABZ78120-ABZ78168 and ABR01789-ABR01861). The genes and proteins are useful for eliciting a humoral or cellular immune response. The genes are useful as probes and primers or the amplification and/or detection of genes, mRNAs or their fragments, as reagents for the diagnosis and/or prognosis of cancer, as coding sequences capable of directing the expression of the protein, as tools for modulating or inhibiting the expression of genes and/or translation of transcripts, and as therapeutic genes. The proteins and peptides are useful as therapeutic, prognostic and diagnostic reagents for cancer. The present sequence is a human leukocyte antigen (HLA) peptide, used in an example from the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    New composition comprising a substance that modulates the structure of proteins and polynucleotides, useful for therapeutic, prognostic and diagnostic reagents for eliciting cellular or humoral immune response in cancer patients.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Gaps

The present invention relates to novel human cancer-related genes and proteins (ABZ78120-ABZ78168 and ABR01789-ABR01861). The genes and proteins are useful for eliciting a humoral or cellular immune response. The genes are useful for proteins approbes and primers for the amplification and/or detection of genes, mRNAs or their fragments, as reagents for the diagnosis and/or prognosis of cancer, as coding sequences capable of directing the expression of the protein, as tools for modulating or inhibiting the expression of genes and/or translation of transcripts, and as therapeutic agents. The proteins and poptides are useful as therapeutic and alagnostic and diagnostic reagents for cancer. The present sequence is a human leukocyte antigen (HLA) peptide, used in an example
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         New composition comprising a substance that modulates the structure of proteins and polymucleotides, useful for therapeutic, prognostic and diagnostic reagents for eliciting cellular or humoral immune response in cancer patients.
                                                                                                                                                                                                                                                                                                                                                                                                              Ge W, Hubert RS;
                                                                                                     Human, cytostatic, vaccine, cancer; immune response; HLA; human leukocyte antigen.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Score 41; DB 6; Length 10;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Sequence 2
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Description
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    1. Patent No. 574449
GENERAL INFORMATION:
APPLICANT: BINIE V. LIPPS AND FREDERICK W. LIPPS
TITLE OF INVENTION: EMBODIMENTS OF NATURAL AND
TITLE OF INVENTION: SYNTHETIC LINES AND THEIR
TITLE OF INVENTION: UTILITY AS TREATMENT FOR ENVENOMATION
NUMBER OF SEQUENCES: 3
CORRESPONDENCE ADDRESS:
ADDRESSEE: BINIE V. LIPPS

Patent No. 6187548

GENERAL INFORMATION:
APPLICANT: Alerstrom, Goran
APPLICANT: Juhlin, Claes
APPLICANT: Crumley, Gregg R.
APPLICANT: Morse, Clarence C.
APPLICANT: Morray, Edward M.
APPLICANT: Hjalm, Goran
TITLE OF INVENTION: Human Calcium Sensor Protein, Fragments
TITLE OF INVENTION: Thereof and DNA Encoding Same
NUMBER OF SEQUENCES: 106
CORRESPONDENCE ADDRESS:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Score 32; DB 1; Length 11;

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

"A new Vibrio fischeri lux gene precedes a bidirectional termination site for the lux operon.";

J. Bacteriol. 172:6797-6802 (1990).

-I. FUNCTION: Acyl-protein synthetase activates tetradecanoic acid. It is a component of the fatty acid reductase complex responsible for converting tetradecanoic acid to the aldehyde which serves as substrate in the luciferase-catalyzed reaction.

-I. CATALYTIC ACTIVITY: ATP + an acid + protein = AMP + diphosphate + an acyl-protein thiolester.

-I. PATHWAY: Bioluminescent fatty acid reduction system; second step.

-I. SIMILARITY: Belongs to the luxE family.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Int. J. Pept. Protein Res. 39:258-264(1992).

-1- FUNCTION: Neuroexcitatory peptide; increases the impulse frequency and produces a spike broadening of the identified heart excitatory neuron (PON); also enhances the amplitude and frequency of the heart beat. Has also an effect on several other muscles. PIR; A32480; A33480.

D-amino acid, Direct protein sequencing; Hormone.

NOD RES.

2 D-phenylalanine.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              MEDLINE=93014529; PubMed=1399265; Ishida T., In Y., Doi M., Inoue M., Yasuda-Kamatani Y., Minakata H., Ishahida T., Nonto K., "Crystal structure and molecular conformation of achatin-I (H-Gly-D-Phe-Ala-Asp-OH), an endogenous neuropeptide containing a D-amino acid

"Identification of RRamide neuropeptides in the medicinal leech.";
Peptides 12:897-908(1991).
-1- SUBCELLULAR LOCATION: Secreted.
-1- SIMILARITY: Belongs to the FARP (FWRFamide related peptide)
                                                                              FMRFamide-like neuropeptide YLRF-amide.
FMRFamide-like neuropeptide YLRF-amide.

Lethal Toxin Neutralising Factor peptide from opossum - can neutralise venom(s) from all major families of poisonous snakes.

Claim 5; Col 13; 11pp; English.

Toxin Neutralising Factor (LTFF) moiety from a 68 kDa anti-haemorrhagic protein derived from an opossum. The peptide can be used in a method for treating a victim of envenomation from a poisonous snake, preferably a poisonous snake from the family of Elapidae, viperidae or sea snake. It is useful for the treatment of snake bites, sepsis, allergies caused by the environment and treatment of bee or scorpion stings or toxicities caused by plant or bacterial toxins. The peptide can also be used in histamine reaction treatment. The peptide can be used in envenomation treatment for a variety of snakes without prior identification of the This sequence represents the peptide of the invention. It is a Lethal

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The sequences given in ABB80222-28 represent lethal toxin neutralising factor (LTMP) peptides which may be used for reducing elevated levels of serum proteins selected from immunoglobulin B (IgE), nerve growth factor (NGF), insulin, myoglobin and/or adenosines (ADA). In particular, the methods of the invention are useful for diagnosing and trienting conditions with elevated serum IgE levels, e.g. asthma, diabetes, autoimmune disease (e.g. erythematosus (SLE), rheumatoid arthitis, Sjogran's syndrome, Reiter's syndrome, Graves' disease, dations or Hodgkin's disease) or depression. The efficacy of the protein may be monitored by assaying a human endogenous protein by performing an enzyme-linked immunosorbent assay (ELISA) on a saliva collection is relatively non-invasive when compared to blood collection for serum. Saliva proteins and election is relatively non-invasive when compared to blood collection for serum. Saliva proteins contrifung time before centrifugation to separate serum. Saliva proteins can be assayed by a simple ELISA test, whereas an assay of proteins from serum requires a more complicated sandwich type ELISA
                                                                                                                                               ö
snake. Being short it can be synthetically prepared rather than the current production in horses, where some people can show hypersensitivity

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The invention relates to methods to determine the etiological agent of autoimmune diseases such as systemic lupus erythematosus (SLB). A common antigen for SLB and closely related disorders is the 60 kD protein-RNA particle: Ro/SSA, present in all cells studied to date. Staphylococcus WB protease digestion of this protein reveals bands of 51, 40, 35, 28 and 13 kD which are strongly immunoreactive with SLB autoantibodies. From the 13 kD band, peptide AAWA4911 demonstrated maximal antigenicity against antiscontain the between for other peptides reactive with SLB autoantibodies antibodies. An example of such a peptide is the sequence presented here which is derived from the nucleocapsid protein of the Indiana serotype of the vesicular stomatties virus. The invention relates to increasing or reducing cell apoptosis. The method involves providing at least 1 cell or a tissue, and a polypeptide method involves providing at least 1 cell or a tissue, and a polypeptide content of many and administering the polypeptide to the cell so that apoptosis of the cell or tissues is increased or reduced. The polypeptide is selected from ABR8223-28 and administering the polypeptide to the cell so that apoptosis of the cell or tissues is increased or reduced. The polypeptide is selected from cell or tissues is nethods and compositions are useful for diagnosing, (CEBPbeta). The methods and compositions are useful for diagnosing. The fibrosis is hepatic, lung, kidney or ocular fibrosis, where the hepatic fibrosis is the associated with rejection of liver transplant, hepatitis C infection, chart that a wound, burn, trauma, environmental toxin or ischaemia, or with a disease in a lung, kidney or ocular tissue. The cell apoptosis conditions also associated with a liver disease from rejection of liver transplant, hepatitis C infection, hepatitis B infection, alcoholism, toxic liver disease, penetic chaemochromatosis and porphyria. The fibrosis or cell apoptosis is also associated with brain gliosis, Alzheimer's disease, hepatic disease, brain damage, neurological trauma, the fibrosis conditions and fibrotic pulmonary disease. The present sequence represents a tetrapeptide obtained from exemplary mouse and human controlled to the exemplary controlled to the exemplace of the exemp

This invention describes novel peptides (1) of the defensin type which have antibacterial, antiinfertility and contraceptive activity and which can be used for peptide therapy. (1), and their derivatives and can be used for peptide therapy. (1) and their derivatives and cassociated will be treat bacterial infections, particularly of the gastrointestinal, respiratory or urogenital tracts, or of the skin coverexpression or deficiency of defensin production, particularly as ubstitution therapy or by using (1)-specific antibodies; (ii) to treat infertility, sepecially where the result of disordered sperm penetration, infation or maturation, also as contraceptives, and (iv) as a diagnostic marker of inflammatory disease in epithelial organs. Both chronic and coute diseases may be treated, e.g. in intensive care. Also genes that canced (1) can be used for systemic or localised gene therapy of the specified diseases, in epithelial tissues or organs. (1) have exceptional consistence are particularly well suited for long-term use. This sequence response, they are particularly well suited for long-term use. This sequence represents
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ö

The invention relates to peptides (AAMS1251-AAMS1381) with a higher affinity to gp120, part of the outer shell of HIV, than known peptides. CC affinity to gp120, shown by formula (H-)-Ha-A3-A4-A5-R. C(1), A1-A2-A3-A4-A5-R. (2) or H-A1-A2-A3-A4-A5-R. (3), (H-)-a1-a2-a3-a4-A5-R. (2), A1-A2-A3-A4-A5-R. (3), CH-) a1-a2-a3-a4-A5-R. (2), A1-A2-A3-A4-A5-R. (3), CH-) a1-a2-a3-a4-A5-R. (5) or H-A1-A2-A3-A4-A5-R. (6). A1 = ASp. CC Lys. Val. Glu, Gly, Asn or Tyr residue, A2 = A3-A3-A5-R. (6). A1 = ASp. CC Lie, Leu or Tyr residue; A3 = Lys. Asy, Arg, And or Tyr residue; A3 = Lys. Arg, Phe. Trp. Pro or Tyr residue, R = OH derived CC Asp. Glu, His. Lys. Arg, Phe. Trp. Pro or Tyr residue R = OH derived C Tyr Val. Glu, Gly, Asn or Tyr residue, or a polypeptide residue having optional amino acids at N-terminal, A5. = Gly, A1. Leu, I1e, Ser, CThr. Met, Asn. Gln, His. Lys. Arg, Phe. Trp, Pro or Tyr residue, or a polypeptide residue having optional amino acids at C-terminal; a1 = Tyr. C Thr. Met, Asn. Gln, His. Optional amino acids at C-terminal; a1 = Tyr. C Thr. His or Lys residue; a3 = Lys. Tyr. Arg, Gln, His, Lys. Arg, Phe or Tyr Arg, Trp, His or C Try residue; a5 = Gly, A1, Leu, I1e, Ser, Thr. Met, A3, A1, Val, Leu, His. C Tyr residue; a1 = Tyr. Arg, Phe, Tyr or Try residue; a1 = Tyr. Arg, Phe, Tyr or Try residue; a1 = Tyr. Arg, Phe, Tyr or Try residue; a1 = Tyr. Arg, Phe, Tyr or Try residue having optional amino acids at C terminal; and a5' = Gly, A1a, Val, Leu, I1e, Ser, Thr. Met, Asn. Gln, His or Asp residue, or a polypeptide residue having optional amino acids at C-terminal; and a5' = Gly, A1a, Val, Leu, I1e, Ser, Thr. Met, Asn. Gln, His or His, Lys, Arg, Phe, Tyr or Try or Try, or a Dolypeptide residue having optional amino acids at C-terminal; and a5' = Gly, A1a, Val, Leu, I1e, Ser, Thr. Met, Asn. Gln, A1a, Val, Leu, I1e, Ser, Thr. Met, Asn. Gln, A1a, Val, Leu, I1e, Ser, Thr. Met, Asn. Gln, A1a, Val, Leu, I1e, Ser, Thr. Met, Asn. Gln, His, Lys, Arg, Phe, Tyr or Try, or Try 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Human; protein degradation; siah-mediated degradation protein; SMDP; SCF-complex protein; SCP; siah-latlpha; siah-latine protein; SCP; SkP;-associated F-box protein; SAF-1; SAF-2; SAD; cancer; cell division; Skpl-associated destruction-box protein; inflammatory disease.
                                                                                                                                                                                                               Novel peptides with affinity to gp 120, useful for treatment of HIV.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Score 15; DB 4; Length 5;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Sequences encoding SDD1, a subtilisin-like serine protease, can be used to produce transgenic plants with altered stomata characterisitics. These plants exhibit improved freshness, increased dry weight, reduced leaf temperatures, reduced water loss and lower water consumption and for enhancing the sugar and/or protein content of plant leaves, modulating photosynthesis under high intensity conditions or for the improvement of disease resistance of plants. The transgenic plants and cells of such plants are useful in the preparation of feed, food or additives
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Novel recombinant DNA molecules encoding subtilisin-like serine protease, useful for producing transgenic plants with altered stomata, lower water consumption and enhanced diseased resistance.

                                                                                                                                                                                                                                                     셤
                                                                                                           The present invention provides the protein and coding sequences of several siah-mediated degradation proteins and SCF-complex proteins. These are designated Siah-lalpha, Siah-l interacting protein (SIP), which encodes two proteins due to alternative splicing (SIP-L and SIP-S), Skplassociated F-box protein-lalpha and beta and -2 (SAF-lalpha, SAF-lbeta and SAF-2) and Skplassociated destruction-box protein (SAD). The proteins and their coding sequences are useful in the diagnosis and treatment of cancers, disorders where too little cell division occurs such as bone marrow aplasias, immunodeficiencies and inflammatory diseases including sepsis, fibrosis, arthritis and graft versus host
                                                                                                                                                                                                                                                                                      ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New peptides having growth inhibitory action, useful for inhibiting tumor or cancer cell proliferation, or for treating fibrotic disorders, myeloproliferative diseases, and blood vessel proliferative (angiogenic) disorders.
                                                                                                                                                                                                                                                                                     Gaps

New peptides having growth inhibitory action, useful for inhibiting tumor or cancer cell proliferation, or for treating fibrotic disorders, myeloproliferative diseases, and blood vessel proliferative (angiogenic) disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention relates to an isolated peptide or polypeptide (I) of no more than about 50 amino acid residues which when contacted with cells in which a platelet-derived growth factor receptor (PDGF-R) is activated in an autocrine manner, inhibits the growth of these cells. The isolated peptides or polypeptides preferably have the sequences: Lys-Lys-Lys-Lys-Lys (P1) Asp-Asp-Glu-Glu-Lys (P2) Lys-Leu-Met-Ser-Tyr (P3) Phe-Phe-Phe-
                                                                                                                                                                                                                                                                                                                                                                                             Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        cytostatic; platelet-derived growth factor receptor; PDGF-R; cancer; carcinoma; asrcoma; osteosarcoma; glioma; melanoma; myxoma; adenoma; neuroblastcoma; rhabdomyoma-derived cell; fibrotic disorders; myeloproliferative disease; blood vessel proliferative disease;

Lys-Lys (P4) Phe-Phe-His-Pro-val (P5) . (1) is useful for inhibiting cell proliferation, where the cell is a tumor or cancer cell (e.g. carcinoma, sarcoma, osteosarcoma, glloma, melanoma, myxoma, adenoma, neuroblastoma, or rhabdomyoma-derived cell), lung, breast, colon, prostate, kidney, ovary, testicular, skin, pancreatic, thyroid, adrenal, pituitary, brain, muscle or bone cell. The peptides are also useful for treating fibrotic disorders, myeloproliferative diseases, and blood vessel proliferative (anglogenic) disorders. This sequence represents a shuffled P3 peptide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       New polypeptide useful for selecting antigen for antigen binding variable domain that binds to target antigen.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The invention relates to a novel polypeptide comprising a variant CDRH3 antibody variable domain. The invention further provides an antibody phage library. The variant CDRH3 polypeptide is useful for selecting an antigen for an antigen binding variable domain that binds to a target. The phage library is useful for selecting a polypeptide that binds to a target attigen from the library of polypeptides and isolating high affinity binders to a target antigen from the library of polypeptides and isolating high expression vectors. This sequence represents a variable antibody domain related polypeptide of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                polypeptide useful for selecting antigen for antigen binding variable
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The invention relates to a novel polypeptide comprising a variant CDRH3 antibody variable domain. The invention further provides an antibody phage library. The variant CDRH3 polypeptide is useful for selecting an antigen for an antigen binding variable domain that binds to a traget. The phage library is useful for selecting a polypeptide that binds to a target antigen from the library of polypeptides and isolating high affinity binders to a target antigen from the library of polypeptides and isolating high expression vectors. This sequence represents a variable antibody domain related polypeptide of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Gaps

This invention relates to a novel polypeptide comprising a variant composition and all deat one structural amino acid position, and at least one structural amino acid position, and at least one non-structural position having a variant amino acid. The invention is non-structural position having a variant amino acid. The invention is useful for designing a CDRH3 scaffold and the polypeptides are useful as a source for identifying novel antigen binding polypeptides are useful as a source for identifying novel antigen binding polypeptides and antibody variable domains that can be used therapeutically or as reagents. A synthetic antibody phage library of these polypeptides is useful for screening synthetic antibody or antigen binding polypeptide with a strength as resource for identifying immunoglobulin polypeptide sequences that are capable of interacting with any of a wide variety of target molecules. The invention provides high throughput, variety of target molecules. The invention provides high throughput, of interest. The present sequence is that of a peptide which is related to the novel polypeptide of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                New cysteine contg. peptide derivs. Which inhibit platelet integrin - are useful for treating or preventing circulatory disease, thrombosis, etc., also for affinity purification. of integrins.
                                New polypeptide comprising variant complementarity determining region of heavy chain 3 having structural amino acid positions, and non-structural positions having variant amino acid, useful for identifying antigen binding polypeptides.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ö
                                                                                                                                                                                                                                                                New polypeptide useful for selecting antigen for antigen binding variable
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 complementarity determining region; heavy chain 3; CDRH3, CDRH3 scaffold; synthetic antibody phage library; binding affinity; structural stability;
                                                                                                                                                                                                                                                                                                                                           The invention relates to a novel polypeptide comprising a variant CDRH3 antibody variable domain. The invention further provides an antibody phage library. The variant CDRH3 polypeptide is useful for selecting an antigen for an antigen binding variable domain that binds to a target. The phage library is useful for selecting a polypeptide that binds to a target antigen from the library of polypeptides and isolating high affinity binders to a target antigen from the library of polypeptides and isolating high expression vectors. This sequence represents a variable antibody domain related polypeptide of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Synthetic phage antibody library-related 4D5 antibody peptide SeqID4.

```

The invention relates to new linear peptides of formula X-A-Cys(R1)-B-Z in which X is H or Ac; A is absent or is Asp or a specified polypeptide; B is absent or a specified amino acid or polypeptide; A and B cannot both be absent; and Z is OH or an ester or amide group. The peptides inhibit binding of the platelet integrin gpIIb/IIIa to its natural ligands and so are useful for preventing circulatory diseases, thrombosis, cardiac infarction, inflammation, coronary heart disease, arteriosclerosis, attherosclerosis, stroke, angina pectoris, tumour, osteoporosis, anglogenesis and restenosis. They are also useful for promoting healing of wounds and as ligands for purification of integrins by affinity chromatography. The present sequence is a specific example of the X888888888888888888888888

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Sequence 20, Application US/08335198

Patenn No. 5637454

GENERAL INFORMATION:
APPLICANT: Harley, John B.
TITLE OF INVENTION: Diseases
NUMBER OF SEQUENCES: 41

CORRESPONDENCE ADDRESS:
ADDRESSEE: Kilpatrick & Cody
STREET: 1100 Peachtree Street, Ste. 2800
CITY: Atlanta
STATE: Georgia
COMPUTER READBLE FORM:
MEDIUM TYPE: Floppy disk
COMPUTER: 18 PC Compatible
OPERATING SYSTEM: PC-DOS/MS-DOS
SOFTWARE: PatentIn Release #1.0, Version #1.25

US-08-329-820-4

Sequence 4, Application US/08329820

Patent No. 5747457

GENERAL INFORMATION:

APPLICANT: DONCZYK, ALFRED

APPLICANT: DIEFENBACH, BEATE

APPLICANT: BIPPWANN, FRIEDRICH

ITILE OF INVENTION: Linear Adhesion Inhibitors

NUMBER OF SEQUENCES: 228

COMPUTER READABLE FORM:

MEDIUM TYPE: FLOOPY disk

COMPUTER: IBM PC compatible

OPERATING SYSTEM: PC-DOS/MS-DOS

SOFTWARE: Patentin Release #1.0, Version #1.30 (BPO)

CURRENT APPLICATION DATA:

APPLICATION NUMBER: US/08/329,820

FILING DATE: 27-0CT-1994

CLASSIFICATION NUMBER: DE 4336758.5

FILING DATE: 28-0CT-193

ATTORNEY/AGENT INFORMATION:

NAME: Hamlet-King, Diana

REFERENCE/DOCKET NUMBER: 33,302

REFERENCE/DOCKET NUMBER: 33,302

TELEPHONE: 703-243-6433
